Quantum Mechanics II
Mid-exam
29.10.2010

1. Give a brief description of the following:
   a. Heisenberg picture and Schrödinger picture
   b. Accidental degeneracy
   c. Infinitesimal generator
   d. Irreducible representation
   e. $|\alpha\rangle\langle\beta|$

2. Consider a particle with spin quantum number $s = 1$. Ignore all spatial degrees of freedom and assume that the particle is subject to an external magnetic field $\boldsymbol{B} = B\boldsymbol{u_x}$. The Hamiltonian operator of the system is $H = g\boldsymbol{B}\cdot\boldsymbol{S}$.

   a. Construct first the matrix elements of the ladder operators S_+ and S_- in the $|1\, m_s\rangle$-basis.
   b. Derive then the expressions for the matrices S_x, S_y and S_z in the same basis.
   c. If the particle is initially (at $t = 0$) in the state $|1 1\rangle$, find the evolved state of the particle at times $t > 0$.
   d. What is the probability of finding the particle in the state $|1 -1\rangle$ at different times?

3. Consider two tensor operators $T^{(k)}$ and $U^{(k)}$. Show that $\sum_{q=-k}^{k}(-1)^q T_q^{(k)} U_{-q}^{(k)}$ is a scalar operator. Show that in the case $k = 1$ this quantity is the same as the normal scalar product of vectors.

4.
   a. Show that the Pauli matrices

$$\sigma_1 = \begin{pmatrix} 0 & 1 \\ 1 & 0 \end{pmatrix}, \sigma_2 = \begin{pmatrix} 0 & -i \\ i & 0 \end{pmatrix}, \sigma_3 = \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix}$$

   obey $\sigma_i\sigma_k = \delta_{ik} + i\varepsilon_{ikl}\sigma_l$.
   b. Derive from this the commutation and anticommutation rules for the Pauli matrices.
   c. Show that $(\vec{\sigma}\cdot\vec{a})(\vec{\sigma}\cdot\vec{b}) = \vec{a}\cdot\vec{b} + i\vec{\sigma}\cdot(\vec{a}\times\vec{b})$, where $\vec{a}$ and $\vec{b}$ are two vectors. Is this relation valid for any operators $\vec{a}$ and $\vec{b}$?

5.
   a. Show that in the Heisenberg picture an operator A varies in time according to the equation

$$\frac{dA(t)}{dt} = \frac{i}{\hbar}[H, A(t)].$$

b. The Hamiltonian of a system (an one-dimensional oscillator in en external electric field) is

$$H = \frac{p(t)^2}{2m} + \frac{1}{2} m\omega^2 x(t)^2 - eEx(t).$$

Calculate the equation of motion for the operators $p(t)$ and $x(t)$. Solve $p(t)$ and $x(t)$ in terms of $p(0)$ and $x(0)$.

35. CLEBSCH-GORDAN COEFFICIENTS, SPHERICAL HARMONICS, AND d FUNCTIONS

Note: A square-root sign is to be understood over *every* coefficient, *e.g.*, for −8/15 read $-\sqrt{8/15}$.
